

Harmony in Compliance Overview

'My stress levels have subsided significantly since we adopted **Harmony**. It has been the key to untangling our compliance mess - everything seems so much easier now. The support we are given is outstanding...'

Director,
Telecoms Company

Harmony is a unique software system for simplifying the management of compliance, governance, standards, policies and controls. One neat package delivers everything you need. **Harmony** is a feature-rich environment that is simple and intuitive to use and pulls all the threads together in one place. **Harmony** automates processes and creates an extended environment that promotes more efficient interaction and better communication. **Harmony** makes managing complex projects easy and helps you achieve new highs in accurate decision making.

A Solid Foundation

The Heart of **Harmony** is a sophisticated compliance core which is intuitive to use, flexible and comprehensive. **Harmony's** compliance core presents and manages all aspects of initial and ongoing compliance for any standards or policies and even allows you to add your own. **Harmony** is ideal for a single department or for multiple departments, and business entities across many locations - and anything in between.

Remediation visibility

Orderly, managed workflow and transparent real-time visibility of remediation tasks. **Harmony's** Work Requests module shows each task, who is accountable and the progress they are making. Use **Harmony's** Work Requests module to easily track and manage remediation activity and to quickly drill into any target areas.

Integrated Issue management

If you find spreadsheets a clumsy way to track issues that arise in compliance processes or project management then this is a refreshing alternative. **Harmony's** Issues module lets you easily track and manage issues and the activities of those accountable for addressing them. Capture, track and manage issues holistically and at the individual control level.

Risk Management

Whether you need a stand-alone risk register or an enterprise risk tracker that is fully integrated with compliance, process control or testing activities, **Harmony's** Risk module has the answer. Each risk can be listed and assessed, and the action to mitigate the risks can be recorded and monitored. Control-level through to high-level risk management activities are easily managed as an integral part of your compliance processes.

Enhanced Information

User-friendly reports, user-to-user messaging and **Harmony's** unique 'quality-of-information' indicator add depth and richness to the level of your control.

Manage Incident, Changes, Actions and more...

Harmony's process enhancement capabilities extend as far as you need. As well as those already mentioned, there are other, fully integrated, modules which help you:

- track and manage incidents securely and discretely.
- track, control and streamline the processes of moving changes into the production environment.
- bring visibility to actions and bring status and progress meetings to life.

Pulling it all together

Naturally, you will want to see and to understand clearly everything that relates your compliance work. **Harmony's** dashboard hands to you 'on a plate' the ultimate in visibility and control over all aspects of compliance activity and the complimentary processes that go into truly successful projects. Pulling together all the threads and presenting them in an elegant, easy to understand, dashboard, **Harmony** can help improve the quality and speed of decision-making. **Harmony's** friendly dashboard empowers all users and significantly aids the timely completion of your important compliance and process related work.
